

Newsletter from Smoltek

First of all we want to welcome all new shareholders! We made our IPO at AktieTorget in February. The start of trading was February 26th. This is our first newsletter. It is easy to sign up for it at the front page on our website. Now it is time for some updates.

New office

We have a new office since a few weeks. It is big enough for the current team and gives us opportunities to grow as a team and company. In addition it is close to the laboratory we are using and thereby increases the efficiency. Everyone is satisfied with our new location. You find us in the heart of Gothenburg at Kaserntorget 7.

New employees

We have recruited Ola Tiverman as Chief Operating Officer (COO) and Maria Bylund as R&D Engineer. Both will strengthen and complement our already strong team with their competences.

ECTC in USA is coming up

ECTC - short for Electronic Components and Technology Conference - has been a focus conference for Smoltek during the last years. At this year's edition in San Diego our Rickard Andersson and Vincent Desmaris will present. Ola Tiverman and Bo Hedfors, board member, will also be present to represent Smoltek. ECTC begins on May 29th. You will find more information here: <https://www.ectc.net>.

Message from the CEO

“The move to a functional office is a very important step for the company. The practical distance to the MC2 Lab at Chalmers has increased over the years as it happens a lot in the city and the previous office was quickly becoming way too small for our needs. A five-minute trip to the lab by bus is something completely different. The new location brings the team closer together and will increase the efficiency of our work.”

“We have strengthened the management team with Ola Tiverman. I have known him for some years now and he will provide an excellent boost in our daily work. We have also employed an additional R&D Engineer, Maria Bylund. She gives the company a new resource with slightly different profile. Maria has more of a material orientation compared to the other R&D team members who are generally more focused on technical physics. She has experience from small-scale production of advanced electronics. Maria is a very good addition to the rest of the team.”

“We have continued our business development work. I have recently been to Silicon Valley in that matter. At this trip I had the privilege to have our new chairman Peter Augustsson to accompany me. It was a great support for me and an opportunity for Peter to get deeper insights in our quite “special world”. We had follow-up meetings with customers and other productive dialogues with both “prospects/leads” and our network. The interest that we again experienced both re-confirmed and further strengthened our confidence in our unique technology offering”, says Anders Johansson.
